

FEED SAFETY & HALAL FEED TESTING

Feed safety quality assurance programs are required by feed manufacturers and animal producers to ensure that

- ★ the raw materials being fed to animals meet nutritional requirements and
- ★ feed ingredients added into the feed shall not contain residues or contaminants that can accumulate or be found in the finished product that can be detrimental to human health.

+

COMMITMENT TO FEED QUALITY BEGINS WITH YOU

Microbiology

- Microbial contamination
- Identification of bacteria, yeast & mould

+

Molecular Biology

- Detection of porcine derivatives (Halal Verification)

Chemistry

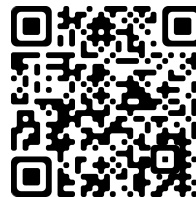

- Antibiotic residue analysis
- β -agonist residue analysis
- Mycotoxin analysis
- Nutritional analysis
- Heavy metal contamination

+

Obtained Certification from Department of Veterinary Services (DVS)

In 2009, the Malaysian Government enacted the Feed Act, 2009. The authority in charge of the Feed Board requires all feed manufacturers, importers or exporters to comply to documentation requirements which include the following for each consignment:

- Health certificate
- Halal certification
- Certificate of origin
- Export permit
